

## Monitoring of Chinese White Dolphins in Southwest Lantau Waters

17<sup>th</sup> *Monthly Progress Report (July 2016)*

*submitted to Environmental Project Office for the HZMB HKLR, HZMB HKBCF and TM-CLKL – Investigation*

Submitted by

Samuel K.Y. Hung, Ph.D.

Hong Kong Cetacean Research Project

2 August 2016

### 1. Introduction

- 1.1. In March 2015, Hong Kong Cetacean Research Project (HKCRP) was appointed by the Environmental Project Office for the HZMB Hong Kong Projects to undertake a monitoring study of Chinese White Dolphins in Southwest Lantau (SWL) waters.
- 1.2. The objectives of the monitoring study are to quantify the abundance and density of Chinese White Dolphins in SWL waters, to identify individuals during the monitoring surveys, and to analyze their range use and movement patterns in Hong Kong and the wider Pearl River Estuary waters.
- 1.3. The monitoring study will supplement the on-going EM&A monitoring results of the HZMB Hong Kong Projects in North and West Lantau waters, and provide a more complete picture of dolphin usage and movements between different survey areas in western Hong Kong waters.
- 1.4. The present report is the 17<sup>th</sup> monthly progress report under this dolphin monitoring study submitted to the Environmental Project Office, summarizing the survey findings during the month of July 2016.

### 2. Monitoring Methodology

#### 2.1. Vessel-based Line-transect Survey

- 2.1.1. According to the requirement of the technical proposal submitted to the Environmental

Project Office, dolphin monitoring programme should cover all transect lines in SWL survey area (see Figure 1) once per month upon instruction. The co-ordinates of all transect lines conducted during the dolphin monitoring survey are shown in Table 1.

Table 1. Co-ordinates of transect lines in SWL survey area (corresponding to transect line layout as shown in Figure 1)

Line #		Northing	Easting		Line #		Northing	Easting	
SWL001	1	806180	802510		SWL007	13	807380	808520	
	2	804250	802510			14	805600	808520	
SWL002	3	806710	803480		SWL008	15	804400	808520	
	4	803450	803480			16	803000	808520	
SWL003	5	807270	804500		SWL009	17	802100	808520	
	6	802690	804500			18	800470	808520	
SWL004	7	807590	805450		SWL010	19	807380	809550	
	8	802295	805450			20	805050	809550	
SWL005	9	808490	806500			21	804400	809550	
	10	801410	806500			22	800470	809550	
SWL006	11	808500	807430			23	807380	810550	
	12	801250	807430			24	800470	810550	
						25	809410	811510	
						26	801470	811510	

- 2.1.2. The HKCRP survey team used standard line-transect methods (Buckland et al. 2001) to conduct the systematic vessel surveys, and followed the same technique of data collection that has been adopted over the last 18 years of marine mammal monitoring surveys in Hong Kong developed by HKCRP (see Hung 2014). For each monitoring vessel survey, a 15-m inboard vessel with an open upper deck (about 4.5 m above water surface) was used to make observations from the flying bridge area.
- 2.1.3. Two experienced observers from HKCRP (a data recorder and a primary observer) made up the on-effort survey team, and the survey vessel transited different transect lines at a

constant speed of 13-15 km per hour. The data recorder searched with unaided eyes and filled out the datasheets, while the primary observer searched for dolphins and porpoises continuously through 7 x 50 Fujinon marine binoculars. Both observers searched the sea ahead of the vessel, between 270° and 90° (in relation to the bow, which is defined as 0°). One to two additional experienced observer was available on the boat to work in shift (i.e. rotate every 30 minutes) in order to minimize fatigue of the survey team members. All observers were experienced in small cetacean survey techniques and identifying local cetacean species.

- 2.1.4. During on-effort survey periods, the survey team recorded effort data including time, position (latitude and longitude), weather conditions (Beaufort sea state and visibility), and distance traveled in each series (a continuous period of search effort) with the assistance of a handheld GPS (*Garmin eTrex Legend*).
- 2.1.5. Data including time, position and vessel speed were also automatically and continuously logged by handheld GPS throughout the entire survey for subsequent review.
- 2.1.6. When dolphins were sighted, the survey team would end the survey effort, and immediately record the initial sighting distance and angle of the dolphin group from the survey vessel, as well as the sighting time and position. Then the research vessel was diverted from its course to approach the animals for species identification, group size estimation, assessment of group composition, and behavioural observations. The perpendicular distance (PSD) of the dolphin group to the transect line was later calculated from the initial sighting distance and angle.
- 2.1.7. Survey effort being conducted along the parallel transect lines that were perpendicular to the coastlines (as indicated in Figure 1) was labeled as “primary” survey effort, while the survey effort conducted along the connecting lines between parallel lines as well as the section around the Soko Islands was labeled as “secondary” survey effort. Both primary and secondary survey effort were presented as on-effort survey effort in this report.
- 2.1.8. Encounter rates of Chinese White Dolphins (number of on-effort sightings per 100 km of survey effort and number of dolphins from all on-effort sightings per 100 km of survey effort) were calculated in SWL survey area in relation to the amount of survey effort conducted during each month of monitoring survey. Only data collected under Beaufort 3 or below condition would be used for encounter rate analysis. Dolphin encounter rates were calculated using the combined survey effort from both primary and secondary lines for comparison to the historical data collected by HKCRP in this survey area. For the historical data, the encounter rates were calculated by pooling all relevant survey effort

and dolphin sightings to calculate a single index.

## 2.2. Photo-identification Work

- 2.2.1. When a group of Chinese White Dolphins were sighted during the line-transect survey, the survey team would end effort and approach the group slowly from the side and behind to take photographs of them. Every attempt was made to photograph every dolphin in the group, and even photograph both sides of the dolphins, since the colouration and markings on both sides may not be symmetrical.
- 2.2.2. A professional digital camera (*Canon EOS 7D* model), equipped with long telephoto lenses (100-400 mm zoom), were available on board for researchers to take sharp, close-up photographs of dolphins as they surfaced. The images were shot at the highest available resolution and stored on Compact Flash memory cards for downloading onto a computer.
- 2.2.3. All digital images taken in the field were first examined, and those containing potentially identifiable individuals were sorted out. These photographs would then be examined in greater detail, and were carefully compared to the existing Chinese White Dolphin photo-identification catalogue maintained by HKCRP since 1995. For individual dolphins that are not readily identifiable from the catalogue but have distinct features on their bodies, they will be placed in a pool of “potential new individuals”, with decision being made at the end of each year on whether any of them should be incorporated into the photo-ID catalogue.
- 2.2.4. Chinese White Dolphins can be identified by their natural markings, such as nicks, cuts, scars and deformities on their dorsal fin and body, and their unique spotting patterns were also used as secondary identifying features (Jefferson 2000).
- 2.2.5. All photographs of each individual were then compiled and arranged in chronological order, with data including the date and location first identified (initial sighting), re-sightings, associated dolphins, distinctive features, and age classes entered into a computer database.

## 3. Monitoring Results

### 3.1. Vessel-based Line-transect Survey

- 3.1.1. One set of systematic line-transect vessel survey was conducted under the present

monitoring study on July 8<sup>th</sup> to cover all transect lines in SWL survey area once. The route and track log of this survey are presented in Figure 2 and Appendix I respectively.

- 3.1.2. In addition, three line-transect surveys were also conducted under the AFCD long-term marine mammal monitoring programme in SWL survey area on July 6<sup>th</sup> (with lines no. SWL001 and SWL003), July 13<sup>th</sup> (with lines no. SWL002, SWL004, SWL006 and SWL008 covered) and July 19<sup>th</sup> (with lines no. SWL005, SWL007 and SWL009 covered). Such monitoring data were also incorporated into the present study for various analyses.
- 3.1.3. For the present study alone, a total of 71.47 km of survey effort was collected from 10:59 to 17:02 (i.e. 6 hours and 3 minutes of survey time) on July 8<sup>th</sup>, with 100% of the total survey effort being conducted under favourable weather conditions (i.e. Beaufort Sea State 3 or below with good visibility) (Appendix II). The total survey effort conducted on primary and secondary lines were 56.57 km and 14.90 km respectively.
- 3.1.4. For the combined monitoring dataset from both the present study and AFCD monitoring study, a total of 138.87 km of survey effort was collected in SWL waters in July 2016.
- 3.1.5. During this monitoring month, 17 groups of 42 Chinese White Dolphins were sighted from the present study's survey and the other three AFCD monitoring surveys (Appendix III). Ten of the 17 dolphin groups were sighted during on-effort search, and none of them was associated with any operating fishing vessel.
- 3.1.6. Notably, no finless porpoise was sighted at all in SWL survey area during this monitoring month.
- 3.1.7. Distribution of the 17 dolphin sightings made in July 2016 is shown in Figure 3. The dolphin groups were mostly located along the coastline from Fan Lau to Kau Ling Chau as well as near Shui Hau Peninsula (Figure 3). Some smaller dolphin groups were also sighted around the Soko Islands (Figure 3).
- 3.1.8. Encounter rates of Chinese White Dolphins deduced from the survey effort and on-effort sighting data made under favourable conditions (Beaufort 3 or below) in July 2016 are shown in Table 2. Comparison of encounter rates was also made to the one deduced in summer months (June-August) in the past decade (2005-14), as well as in July 2015 under the present study (Table 2).

Table 2. Overall dolphin encounter rates (sightings per 100 km of survey effort) from the present monitoring survey and combined database with AFCD monitoring survey conducted in July 2016 (primary lines only, as well as both primary lines and secondary lines were used) in SWL survey area in comparison to the ones deduced during summer months (June-August 2005-14) in the past decade

	Encounter rate (STG)		Encounter rate (ANI)	
	Primary Lines Only	Both Primary and Secondary Lines	Primary Lines Only	Both Primary and Secondary Lines
<b>HYD-HZMB data (July 2016)</b>	8.84	11.19	22.98	30.78
<b>Combined data (July 2016)</b>	4.98	7.26	12.95	20.32
<b>Combined data (July 2015)</b>	7.62	9.89	26.12	35.77
<b>Historical Data (Summer 2005-14)</b>		4.02		11.78

3.1.9. From the combined data of HYD-HZMB and AFCD monitoring surveys, the overall encounter rates based on the number of dolphin sightings (ER(STG)) and the total number of dolphins (ER(ANI)) deduced in July 2016 in SWL waters were much higher than the ones deduced from the historical data during the summer months of 2005-14, but were lower than the ones in July 2015 (Table 2).

3.1.10. The average group size of Chinese White Dolphin sighted during SWL monitoring surveys in July 2016 was 2.5 animals per group, which was lower than the average group size in summer months of 2005-14 (2.9). Fourteen of the 17 dolphin groups were composed of only 1-3 animals, while three other groups were medium in size with 5-7 animals per group (Appendix III).

### 3.2. Photo-identification Work

3.2.1. Attempts were made to photograph the dolphins sighted during all SWL surveys conducted in July 2016.

3.2.2. Among the 42 dolphins sighted during this month's surveys, 21 individual dolphins were identified and re-sighted 32 times in total (Appendices IV and V). Only one individual (WL238) was accompanied by an older calf.

3.2.3. The locations where all individuals were re-sighted were well within their past home ranges in Southwest and West Lantau waters, and all of them have been sighted in

---

Southwest Lantau waters in the past.
