The air quality, noise, water quality and impact dolphin monitoring works under Contract No. HY/2010/02 were suspended from 1 September 2017. The ET of Contract No. HY/2013/01 continued the same environmental monitoring works commencing on 1 September 2017. The entire environmental monitoring responsibility under the EM&A programme for the HZMB HKBCF Project has been changed from Contract No. HY/2013/01 to Contract No. HY/2013/04 since 1 October 2018. It should be noted that the air quality monitoring station (AMS 6) was covered by Contract No. HY/2011/03 Hong Kong-Zhuhai Macao Bridge Hong Kong Link Road – Section between Scenic Hill and HKBCF during the reporting period.

2.1.2 The air quality monitoring at station AMS3C and noise monitoring at station NMS3C are covered by Contract No. HY/2013/04 since 20 August 2018. The air quality monitoring at station AMS2 and AMS7B and noise monitoring at station NMS2 are covered by Contract No. HY/2013/04 HZMB HKBCF – Infrastructure Works Stage II (Southern Portion) since 1 October 2018.

2.1.3 In accordance with the Contract Specific EM&A Manual, impact 1-hour Total Suspended Particulates (TSP) monitoring was conducted for at least three times every 6 days, while impact 24-hour TSP monitoring was carried out for at least once every 6 days. Impact noise monitoring was conducted for at least once per week during the construction phase of the Contract.

Remarks:

(1) The air quality monitoring works at AMS2 were conducted by the ET of Contract No. HY/2013/01 from 1 Sep 2017 to 30 Sep 2018. The air quality monitoring works for the Contract at AMS2 are covered by Contract No. HY/2013/04 since 1 Oct 2018.

(2) For the monitoring location AMS3 (Ho Yu College), as proposed in the Updated EM&A Manual for HKBCF (Version 1), approval for carrying out impact monitoring could not be obtained from the principal of the school. Alternative monitoring location at AMS3B was proposed. The air quality monitoring works at AMS3B were conducted by the ET of Contract No. HY/2013/01 from 1 Sep 2017 to 19 Aug 2018.

(3) The air quality monitoring station at AMS3B was relocated and renamed as AMS3C. The air quality monitoring works at AMS3C are covered by Contract No. HY/2013/04 since 20 Aug 2019.

(4) Same baseline and Action Level for air quality, as derived from the baseline monitoring data recorded at AMS3 - Ho Yu College/ AMS7 - Hong Kong SkyCity Marriott Hotel were adopted for these alternative air quality locations.

(5) The air quality monitoring works at AMS6 were covered by Contract No. HY/2011/03 - Hong Kong-Zhuhai-Macao Bridge Hong Kong Link Road – Section between Scenic Hill and HKBCF during the reporting period.

(6) The original monitoring location was at Hong Kong SkyCity Marriott Hotel (AMS7). As the permission to carry out air quality monitoring at Hong Kong SkyCity Marriott Hotel was not granted after 31 January 2015, the monitoring location was

relocated to Chu Kong Air-Sea Union Transportation Co. Ltd. (AMS7A) from 5 February 2015 to 30 December 2015. The alternative monitoring location at Chu Kong Air-Sea Union Transportation Co. Ltd. was approved by EPD on 5 February 2015. However, AMS7A was relocated back to its original location (AMS7-Hong Kong SkyCity Marriott Hotel) on 30 December 2015. The relocation of air quality monitoring location, AMS7A, back to AMS7 was approved by EPD on 21 December 2015. As the permission to carry out air quality monitoring at Hong Kong SkyCity Marriott Hotel was not granted after the end of January 2018, as such, a proposal for the monitoring location relocated to 3RS Site Office(AMS7B) was justified by the ET Leader for Contract No. HY/2013/01 on 22 January 2018; verified by the IEC on 24 January 2018; and submitted to EPD on 30 January 2018, and the AQM has been carrying out at AMS7B with EPD's consent since 6 February 2018.

(7) The air quality monitoring works for the Contract at AMS7/AMS7A were covered by the Contract No. HY/2010/02 from 26 Sep 2014 to 31 Aug 2017. The air quality monitoring works at AMS7B were conduct by the ET of Contract No. HY/2013/01 from 6 Feb 2018 to 30 Sep 2018; and are covered by Contract No. HY/2013/04 since 1 Oct 2018.

Remarks:

(a) * Due to the presence of deployed silt curtain systems at the site boundaries of the Contract, some of the transect lines shown in Figure 5.1 could not be fully surveyed during the regular survey. Transect 10 is reduced from 6.4km to approximately 3.6km in length due to the HKBCF construction site. Therefore, the total transect length for both NEL and NWL combined is reduced to approximately 108km.

(b) # Coordinates for transect lines 1, 8, 9 and 11 have been updated in respect to the Proposal for Alteration of Transect Line for Dolphin Monitoring approved by EPD on 19 August 2015.

(c) The change of transect lines 2, 3, 4, 5, 6 and 7 and new vessel-based transect line 24 for dolphin monitoring have been proposed due to the marine work of a designated project-Expansion of Hong Kong International Airport into a Three-Runway System (3RS Project). It was justified and verified by the ET Leader for Contract No. HY/2010/02 and the IEC respectively on 24 March 2017 and it was approved by EPD on 12 May 2017.

(d) Due to marine work of the Expansion of Hong Kong International Airport into a Three-Runway System (3RS Project), original transect lines of dolphin monitoring 2, 3, 4, 5, 6 and 7 are enclosed by works boundary of 3RS Project. Alternative dolphin monitoring transect lines 2, 3,4, 5, 6, 7 and 24 are adopted starting from 17 May 2017 to replace the original transect lines.

SS in mg L^{-1} (depth-averaged) at all monitoring stations and control stations	23.5 and 120% of upstream control station's SS at the same tide of the same day*	34.4 and 130% of upstream control station's SS at the same tide of the same day and 10mg/L for WSD Seawater intakes*
Turbidity in NTU (depth-averaged)	27.5 and 120% of upstream control station's turbidity at the same tide of the same day*	47.0 and 130% of upstream control station's turbidity at the same tide of the same day*

* Remarks: Reference is made to EPD approval of adjustment of water quality assessment criteria issued and became effective on 18 February 2013.

Notes:
1. "depth-averaged" is calculated by taking the arithmetic means of reading of all three depths.
2. For DO, non-compliance of the water quality limits occurs when monitoring result is lower than the limits.
3. For turbidity, SS, non-compliance of the water quality limits occurs when monitoring result is higher than the limits.
4. All the figures given in the table are used for reference only and the EPD may amend the figures whenever it is considered as necessary.
5. The 1%-ile of baseline data for dissolved oxygen (surface and middle) and dissolved oxygen (bottom) are 4.2 mg/L and 3.6 mg/L respectively.

Remarks:
^ Alternative water quality monitoring stations at SR3, SR10A and SR10B(N) were justified by the ET Leader on 8 November 2017 and verified by IEC on 13 November 2017; and submitted to EPD on 29 November 2017 and it was approved by EPD on 22 December 2017.
*Only mid-depth of DO were monitored at SR3 during mid-ebb tide during baseline monitoring.
(1) The impact mean of dissolved oxygen levels from 1 September 2017 to 30 September 2018 are calculated using monitoring data in the corresponding monthly EM&A report for Contract No. HY/2013/01.

3.3.7 According to Section 9.10.7.1 of the EIA Report, the maximum potential instant DO depletion was estimated using the estimated maximum potential increase in suspended solids. The DO depletion was calculated to be 0.4 mg/L at WSR 25 while 0 mg/L at WSR 22c and WSR 27 as stated in Table 9.25g of the EIA Report. Comparing average baseline dissolved oxygen level with EM&A results in **Table 3.10**, no significant depletion was found at all sensitive receiver locations. It is noted that the average DO level recorded in the EM&A programme were in similar magnitude as the predicted DO depletion in the EIA Report.

3.3.8 According to Section 9.10.7.4 of the EIA report, the DO of the North-western Water Control Zone is generally high with average ranges between 5.7-6.8 mg/L. The impact mean of dissolved oxygen level are within ranges of the DO levels at North-western Water Control Zone (except station SR4(N) and SR6 which the mean of DO level during impact monitoring are slightly higher than baseline monitoring). As such, there was no adverse effect on dissolved oxygen level due to the works of the Contract No. HY/2013/01.

3.3.9 The EIA determined the acceptability of elevations in suspended solids concentration based on the Water Quality Objectives. The Water Quality Objectives for suspended solids for the North Western Water Control Zones were defined as being an allowable elevation of 30% above the ambient level/ background. The ambient and tolerance values for suspended solids concentrations in the vicinity of sensitive receivers adopted in Table 9.11 of the EIA Report are presented in **Table 3.11**.

Table 3.11 Ambient and Tolerance Values for Suspended Solids Concentration in the Vicinity of Sensitive Receivers adopted in the EIA

WSR 22c	NM1,2,3	5.5	3.7	1.7	1.1
WSR 25	NM4,2,3	5.5	3.7	1.7	1.1

3.3.10 The use of single layer silt curtain system has been modelled in the 2012 “mitigated” scenario. The predicted suspended sediment concentrations under the 2012 mitigated scenario of the Contract as shown in Table 9.22 in the EIA Report are summarized in **Table 3.12**.

3.3.11 For suspended solids, as the baseline monitoring was conducted in October 2011 which is the transitional season or just the start of dry season while no data were recorded in the wet season, direct comparison with the EIA predictions could not be made. The comparison of EM&A results with baseline results in the following paragraphs was based on the criteria of acceptability of 30 percent elevations above the ambient level/ background as defined in the Water Quality Objectives which was also used in scenario predictions in the EIA report.

3.3.12 The mean baseline suspended solids level at each sensitive receivers and 30% of the baseline mean are present in **Table 3.13.**

Regional influences would have effects on deterioration in water quality than activities at the works site. Despite some exceedances were recorded from September 2017 to September 2018, all SS exceedances were not related to Contract No. HY/2013/01 after investigation.

3.4 Dolphins Monitoring Results

Data Analysis

3.4.1 Distribution Analysis – The line-transect survey data was integrated with the Geographic Information System (GIS) in order to visualize and interpret different spatial and temporal patterns of dolphin distribution using sighting positions. Location data of dolphin groups were plotted on map layers of Hong Kong using a desktop GIS (ArcView© 3.1) to examine their distribution patterns in details. The dataset was also stratified into different subsets to examine distribution patterns of dolphin groups with different categories of group sizes, young calves and activities.

3.4.2 Encounter rate analysis – Encounter rates of Chinese white dolphins (number of on-effort sightings per 100 km of survey effort, and total number of dolphins sighted on-effort per 100 km of survey effort) were calculated in NEL and NWL survey areas in relation to the amount of survey effort conducted during each month of monitoring survey. Dolphin encounter rates were calculated in two ways for comparisons with the HZMB baseline monitoring results as well as to AFCD long-term marine mammal monitoring results.

3.4.3 Notably, the previous monitoring data obtained under Contract No. HY/2011/03 (i.e. HKLR03) are referenced and compared to the quarterly monitoring data collected for the HKBCF-PCB project, as both HKBCF-PCB and HKLR03 project data was collected by the same HKCRP survey team, to ensure 100% consistency in monitoring methodology including vessel survey method as well as various analyses. On the contrary, the previous monitoring data collected under HZMB HKBCF-Reclamation Works contract (Contract No. HY/2010/02) was from a different survey team that have adopted different survey methodology (e.g. two observers and one data recorder under HKBCF-Reclamation Works contract, as compared to one primary observer and one data recorder under HKLR03 and HKBCF-PCB contract). Therefore, the previous HKLR03 monitoring data was adopted for comparison with the quarterly data/findings recorded by HKBCF-PCB project. This approach was also adopted in previous four verified quarterly reports (i.e. EM&A quarterly reports no. 13th, 14th, 15th and 16th).

3.4.4 Firstly, for the comparison with the HZMB baseline monitoring results, the encounter rates were calculated using primary survey effort alone, and only data collected under Beaufort 3 or below condition would be used for encounter rate analysis. The average encounter rate of sightings (STG) and average encounter rate of dolphins (ANI) were deduced based on the encounter rates from six events during the present quarter (i.e. six sets of line-transect surveys in North Lantau), which was also compared with the one deduced from the six events during the baseline period (i.e. six sets of line-transect surveys in North Lantau).

3.4.5 Secondly, the encounter rates were calculated using both primary and secondary survey effort collected under Beaufort 3 or below condition as in AFCD long-term monitoring study. The encounter rate of sightings and dolphins were deduced by dividing the total number of on-effort sightings (STG) and total number of dolphins (ANI) by the amount of survey effort for the present quarterly period.

3.4.6 Quantitative grid analysis on habitat use – To conduct quantitative grid analysis of habitat use, positions of on-effort sightings of Chinese White Dolphins collected during the quarterly impact phase monitoring period were plotted onto 1-km^2 grids among NWL and NEL survey areas on GIS. Sighting densities (number of on-effort sightings per km^2) and dolphin densities (total number of dolphins from on-effort sightings per km^2) were then calculated for each 1 km by 1 km grid with the aid of GIS. Sighting density grids and dolphin density grids were then further normalized with the amount of survey effort conducted within each grid. The total amount of survey effort spent on each grid was calculated by examining the survey coverage on each line-

transect survey to determine how many times the grid was surveyed during the study period. For example, when the survey boat traversed through a specific grid 50 times, 50 units of survey effort were counted for that grid. With the amount of survey effort calculated for each grid, the sighting density and dolphin density of each grid were then normalized (i.e. divided by the unit of survey effort).

3.4.7 The newly-derived unit for sighting density was termed SPSE, representing the number of on-effort sightings per 100 units of survey effort. In addition, the derived unit for actual dolphin density was termed DPSE, representing the number of dolphins per 100 units of survey effort. Among the 1-km^2 grids that were partially covered by land, the percentage of sea area was calculated using GIS tools, and their SPSE and DPSE values were adjusted accordingly. The following formulae were used to estimate SPSE and DPSE in each 1-km2 grid within the study area:

$$SPSE = ((S / E) \times 100) / SA\%$$
$$DPSE = ((D / E) \times 100) / SA\%$$

where S = total number of on-effort sightings
D = total number of dolphins from on-effort sightings
E = total number of units of survey effort
SA% = percentage of sea area

3.4.8 Behavioural analysis – When dolphins were sighted during vessel surveys, their behaviour was observed. Different activities were categorized (i.e. feeding, milling/resting, traveling, socializing) and recorded on sighting datasheets. This data was then input into a separate database with sighting information, which can be used to determine the distribution of behavioural data with a desktop GIS. Distribution of sightings of dolphins engaged in different activities and behaviours would then be plotted on GIS and carefully examined to identify important areas for different activities of the dolphins.

3.4.9 Ranging pattern analysis – Location data of individual dolphins that occurred during the 3-month impact phase monitoring period were obtained from the dolphin sighting database and photo-identification catalogue. To deduce home ranges for individual dolphins using the fixed kernel methods, the program Animal Movement Analyst Extension, was loaded as an extension with ArcView© 3.1 along with another extension Spatial Analyst 2.0. Using the fixed kernel method, the program calculated kernel density estimates based on all sighting positions and provided an active interface to display kernel density plots. The kernel estimator then calculated and displayed the overall ranging area at 95% UD level.

6 Comments, Recommendations and Conclusion

6.1 Comments

6.1.1 During the reporting period, 214 environmental site inspections were carried out to monitor the implementation of proper environmental pollution control and mitigation measures for the Contracts. All work site areas under the Contract No. HY/2013/01 have been handed over to the relevant responsible parties since 24 October 2018 and the site areas have been changed to closed area. No environmental site inspection was conducted for the Contract No. HY/2013/01 from 1 November 2018 to 31 January 2019.

6.1.2 Particular observations during the site inspections are described in the monthly EM&A Reports for Contract No. HY/2013/01 (from September 2014 to January 2019). The Contractor rectified the observations as identified during environmental site inspections during the reporting period. With implementation of the recommended environmental mitigation measures listed in the approved EIA Report, EM&A Manual and EP, the contract's environmental impacts were considered environmentally acceptable. The weekly environmental site inspections ensured that the environmental mitigation measures recommended were effectively implemented.

After Investigation, it was concluded that all exceedances were not related to Contract No. HY/2013/01. It is noted that no marine work and marine transportation were being done by the Contract No. HY/2013/01 from 1 October 2018 to 31 January 2019. For investigations and the findings with respect to the exceedances of water quality monitoring from October 2018 to January 2019 can be referred to the corresponding monthly EM&A Report prepared by Contract No. HY/2013/04.

6.3.5 The details of the impact dolphin monitoring exceedances can be referred to corresponding Quarterly EM&A reports prepared by Contract No. HY/2010/02 (from September 2016 to August 2017). Four Limit Level exceedances of dolphin monitoring for the quarterly monitoring data were recorded by Contract No. HY/2013/01 from September 2017 to August 2018. The details of the dolphin monitoring exceedances from September 2018 to November 2018 can be referred to corresponding Quarterly EM&A report for October 2018 to November 2018 prepared by Contract No. HY/2013/04.

6.3.6 Environmental site inspections were carried out for the Contract No. HY/2013/01 (includes the construction works of Contract No. HY/2013/06 within Contract No. HY/2013/01 works area) during the reporting period. The weekly environmental site inspections ensured that the environmental mitigation measures recommended were effectively implemented.

6.3.7 There were 11 complaints received in relation to the environmental impact during the reporting period. After investigation, most of the complaints were not related to Contract No. HY/2013/01. For the complaints which were related to the Contract No. HY/2013/01, the Contactor was reminded to implement all necessary mitigation as specified in EIA, EM&A Manual, Environmental Management Plan, method statement, general and particular specification of the Contract.

6.3.8 No notification of summons and successful prosecution was received during the reporting period.

6.3.9 After investigation, all exceedances of air quality and water quality were not related to Contract No. HY/2013/01. The results are generally in line with the EIA Prediction that air quality, noise, water quality impact would be controlled and would not exceed the acceptable criteria, with proper implementation of the recommended mitigation measures.

6.3.10 The EM&A programme effectively monitored the environmental impacts from the construction activities and ensure the proper implementation of mitigation measures. The EM&A programme is considered to be cost effective. No particular recommendation was advised for the improvement of the EM&A programme.

6.3.11 As informed by the Contractor, all major construction activities for Contract No. HY/2013/01 have been substantially completed and only minor maintenance works will be carried out on site upon request. All work site areas under Contract No. HY/2013/01 have been handed over

to relevant responsible parties since 24 October 2018. The EM&A requirement of landscape soft works for establishment phase was appropriately arranged. After reviewing the existing environmental conditions of the site, it is considered that the potential environmental impacts associated with the remaining works are insignificant and therefore propose to terminate the construction phase EM&A Programme under Contract No. HY/2013/01. Independent Environmental Checker (IEC) verified the proposal for termination of EM&A programme under Contract No. HY/2013/01 on 25 October 2018. According to EPD's memo reference ( ) in E771/E1/100 dated 1 February 2019 , EPD had no comment on the proposal for termination of EM&A programme for Contract No. HY/2013/01. The construction phase EM&A programme for Contract No. HY/2013/01 was terminated since 1 February 2019.

S8.3.8	WM1	• Implement an enhanced Waste Management Plan similar to ETW BTC (Works) No. 19/2005 – "Environmental Management on Construction Sites" to encourage on-site sorting of C&D materials and to minimize their generation during the course of construction. • In addition, disposal of the C&D materials onto any sensitive locations such as agricultural lands, etc. should be avoided. The Contractor shall propose the final disposal sites to the Project Proponent and get its approval before implementation.	Good site practice to minimize the waste generation and recycle the C&D materials as far as practicable so as to reduce the amount for final disposal	Contractor	All construction sites	Construction stage	• ETW BTC 19/2005	√ √
S8.3.9-S8.3.11	WM2	*C&D Waste* • Standard formwork or pre-fabrication should be used as far as practicable in order to minimise the arising of C&D materials. The use of more durable formwork or plastic facing for the construction works should be considered. Use of wooden hoardings should not be used, as in other projects. Metal hoarding should be used to enhance the possibility of recycling. The purchasing of construction materials will be carefully planned in order to avoid over ordering and wastage. • The Contractor should recycle as much of the C&D materials as possible on-site. Public fill and C&D waste should be segregated and stored in different containers or skips to enhance reuse or recycling of materials and their proper disposal. Where practicable, concrete and masonry can be crushed and used as fill. Steel reinforcement bar can be used by scrap steel mills. Different areas of the sites should be considered for such segregation and storage. S8.2.12-S8.3.15	WM3	• Disposal of chemical waste should be via a licensed waste collector; be to a facility licensed to receive chemical waste, such as the Chemical Waste Treatment Centre which also offers a chemical waste collection service and can supply the necessary storage containers; or be to a reuser of the waste, under approval from the EPD.	Control the chemical waste and ensure proper storage, handling and disposal.	Contractor	All construction sites	Construction stage		√
S8.3.16	WM4	*Sewage* • Adequate numbers of portable toilets should be provided for the workers. S8.3.17	WM5	*General Refuse* • General refuse generated on-site should be stored in enclosed bins or compaction units separately from construction and chemical wastes. • A reputable waste collector should be employed by the Contractor to remove general refuse from the site, separately from construction and chemical wastes, on a daily basis to minimize odour, pest and litter impacts. Burning of refuse on construction sites is prohibited by law. • Aluminium cans are often recovered from the waste stream by individual collectors if they are segregated and made easily accessible. Separate labelled bins for their deposit should be provided if feasible. • Office wastes can be reduced through the recycling of paper if volumes are large enough to warrant collection. Participation in a local collection scheme should be considered by the Contractor. In addition, waste separation facilities for paper, aluminum cans, plastic bottles etc., should be provided. • Training should be provided to workers about the concepts of site cleanliness and appropriate waste management procedure, including reduction, reuse and recycling of wastes. Remarks:

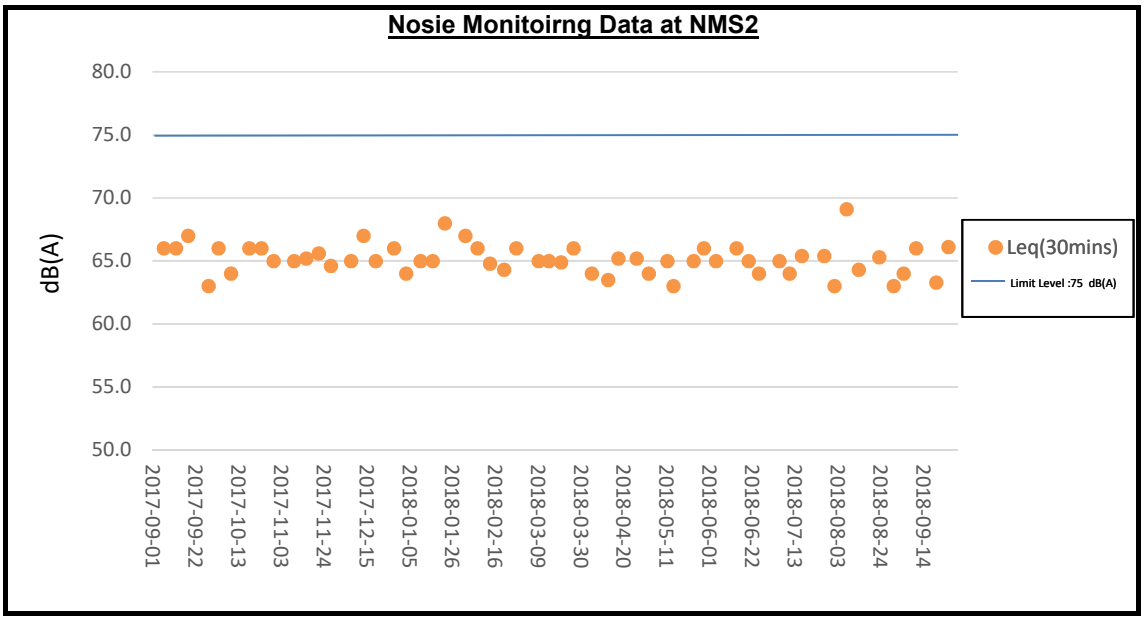
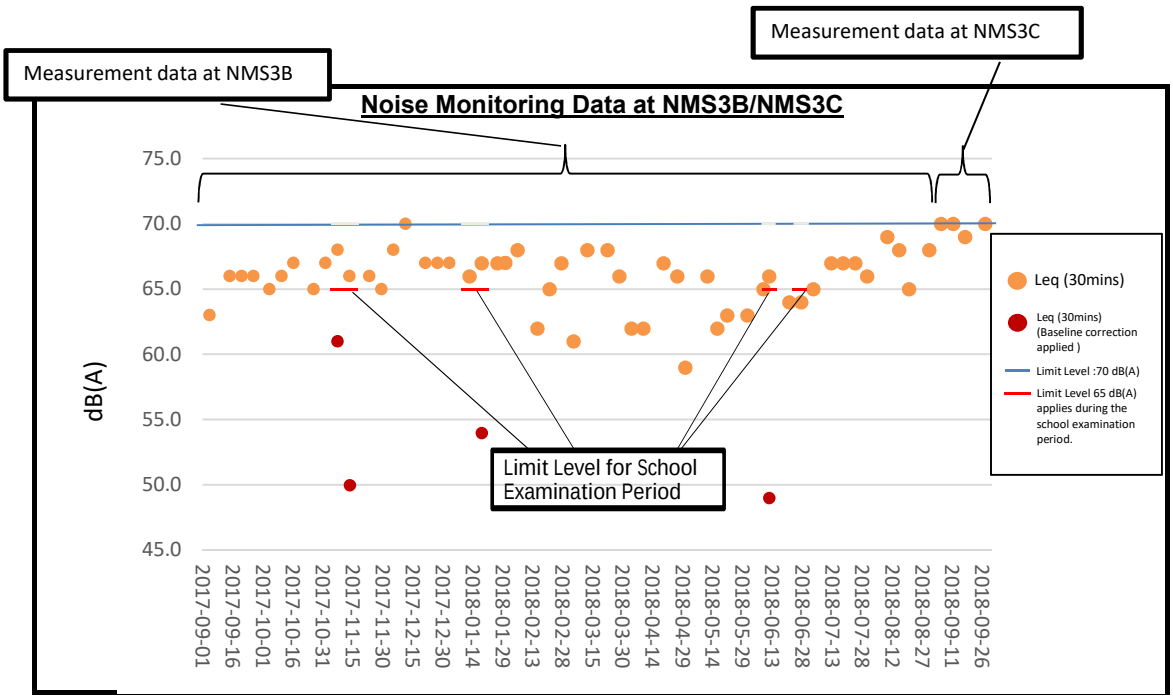
* A correction of +3dB(A) was made to the free-field measurment.



(1) The measured noise level was 67.5 dB(A) on 7 Nov 2017, which exceeded the noise level of 65dB(A) during examination period and it was higher than the baseline level of 66.3 dB(A). Therefore, baseline correction was applied and the corrected noise level which solely represent the noise level of construction work was 61.3 dB(A). As such the Event and Action Plan (EAP) was not triggered.

(2) The measured noise level was 66.4 dB(A) on 13 Nov 2017, which exceeded the noise level of 65dB(A) during examination period and it was higher than the baseline level of 66.3 dB(A). Therefore, baseline correction was applied and the corrected noise level which solely represent the noise level of construction work was 50.0 dB(A). As such the EAP was not triggered.

(3) The measured noise level on 12 Jan 2018 exceeded the noise level of 65dB(A) during examination period but it was below the baseline level (i.e. 66.3dB(A)). Therefore, the measured noise level was not considered as an exceedance. As such, the EAP was not triggered.



(4) The measured noise level on 18 Jan 2018 exceeded the noise level of 65dB(A) during examination period and it was higher than the baseline level of 66.3dB(A). Therefore, baseline correction was applied and the corrected noise level which solely represent the noise level of consturction work was 54 dB(A) which is lower than the exceedance level of 65 dB(A). As such the EAP was not triggered.

(5)The measured noise level was 66.4 on 11 Jun 2018 exceeded the noise level of 65B(A) during examination period and it was higher than the baseline level fo 66.3dB(A). Therefore, baseline correction was applied and the corrected noise level which solely represent the noise level of consturction work was 49 dB(A) which was lower than the exceedance level of 65 dB(A). As such

Remark:

1) The summary of weather conditions and construction activities undertaken on site can be referred to Pages 1 to 8 of Appendix F.

Remarks:

1) Baseline correction was applied for the measured noise level on 7, 13 Nov 2017, 18 Jan 2018 and 11 Jun 2018 and the corrected noise level which solely represent the noise level of construction work below the Limit Level (65dB(A)) during exam period.

2) Noise Monitoring at NMS3C has been undertaking by the ET for Contract No. HY/2013/04 since 20 August 2018.

3) The summary of weather conditions and construction activities undertaken on site can be referred to Pages 1 to 8 of Appendix F.
