Works Undertaken (at the time of monitoring event)	On 12 March 2020, Tunnel internal structure works were carried out on site.	
Possible Reason for Action or Limit Level Exceedance(s)	<p>The exceedance is unlikely to be due to this Contract, in view of the following:</p> <ul style="list-style-type: none"> • According to the construction information provided by the Contractor, only Tunnel internal structure works were carried out on site on 12 March 2020. • The exceedance is unlikely to be due to this Contract as dust suppression measures were implemented properly on site. Water spraying was applied on site to prevent dust. Water spraying was also applied on exposed soil within the Contract site and associated works areas. • With reference to the recorded wind direction (ranged between 72° and 87°, blowing from a easterly direction) and wind speed (2.7 m/s) during the works period, Station ASR5 is located upstream to the construction works at the Tunnel, which is unlikely impacted by the construction works under this Project. <p>Based on the above, the exceedance is unlikely to be due to this Contract.</p>	

Actions Taken/ To Be Taken	The Contractor has been reminded to implement the required mitigation measures as per the EP, approved EIA and Updated EM&A Manual including watering to maintain all exposed road surfaces and dust sources wet, use of sprinklers for water spraying, covering the materials having the potential to create dust by clean tarpaulin, use of water truck and watering on all exposed soil within the Contract site throughout the construction period.
Remarks	The monitoring results, wind data and the locations of air quality monitoring stations are attached.
